Swing Safe Mats

The 3'x5'x2" Swing Safe Mat was developed for use under swings and slides. Used with either loose filled or pour n place rubber surfacing playgrounds. This product offers you added protection in areas that sustain extreme traffic.

The Swing Safe Mat eliminates the deep, water filled crevasses that are commonly found under swings and at the end of slides. It prevents kick outs - which often occur with loose filled materials. This mat provides a safety zone where a fall to surface may occur. A 2'x4'x1" version of this product is also available for the daycare or home playground market. Available in Red, Green, Brown and Black.

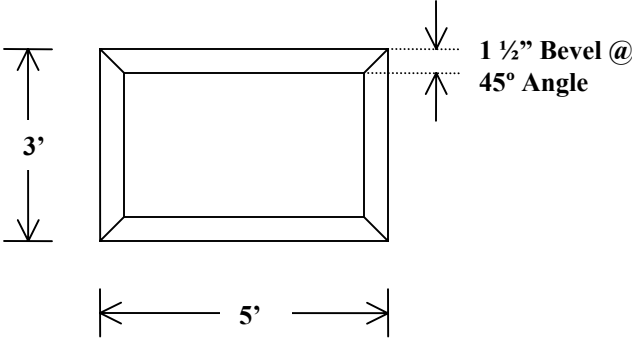

Swing Safe Mat Installation and Specification Detail

***Swing Safe Mats are recommended for use in conjunction with a loose fill ground covering. The mats should be recessed into the loose fill material.**
