## Rubber Flex Barrel Base

Made from 100% ground recycled rubber, this base offers greater stability and reduced roll out than the conventional (tire sidewalls wired together) weighted bases. Unlike bases in the past our Rubber Flex Base has its weight evenly distributed to the outer points, giving greater stability in windy conditions. Because there is no wire in our base there is greater flexibility in cold weather.

Easy grip handle. Easily stackable, guaranteed weight, low profile, square in shape and transport friendly (100/skid). This makes our Rubber Flex Highway Safety Barrel Base the best on the market. Protect your investment; we are able to offer personalized embossing of your company name or logo on this product.

Available in 18, 20 & 25 Lb Models

**Keep a look out for more innovative highway safety products coming soon from RTS Canada Ltd.**
